

COM320 TryHackMe Lab – Offensive Security Intro

Cyber security careers are becoming more in demand and offer high salaries. There are many different jobs within the security industry, from offensive pen-testing (hacking machines and reporting on vulnerabilities) to defensive security (defending against and investigating cyberattacks). The **Careers in Cyber** room helps you break into cyber security by providing information about various cyber security roles; it also links to different learning paths that you can use to start building your cyber skills.

"To outsmart a hacker, you need to think like one" is the core of "Offensive Security." It involves breaking into computer systems, exploiting software bugs, and finding loopholes in applications to gain unauthorized access. The goal is to understand hacker tactics and enhance our system defences. The **Offensive Security Intro room** guides you through hacking your first website in a legal and safe environment. The goal is to show you how an ethical hacker operates.
